

## Part I “Global CCS Update”

# “Cliff Head CO2 Storage Project – Progress in converting mature life offshore oil field to permanent CO2 storage operation”

## Brad Lingo

Chairman

Pilot Energy Ltd.

Mr. Lingo has extensive experience in formulating and implementing growth strategies to create and maximize value across the energy value chain– from the energy resource through to the point of energy utilization. Throughout his 40-year career, Mr. Lingo has held a number of Board, C-Suite and senior executive roles namely at Drillsearch, Commonwealth Bank, Sunshine Gas and Epic Energy – focusing on delivery of cost competitive energy solutions aimed at growing and delivering shareholder value. In 2014, Mr. Lingo received industry recognition including winning the SMH/East Coles S&P/ASX 200 Energy Best CEO.

### **Abstract of presentation:**

Pilot Energy Limited is an Australian oil and gas producing company transitioning to clean energy. Its flagship Mid West Clean Energy Project aims to develop an integrated CO2 storage service and produce clean ammonia leveraging existing oil and gas infrastructure as well as renewable energy resources.

The project is currently in the Pre-FEED/FEED stage. CO2 storage operations are anticipated to commence in 2026 followed by blue ammonia production from 2028. This case study presentation focuses on the CO2 storage aspect of the project. Pilot has encountered numerous technical, regulatory and commercial challenges which has shaped project development. This case study shares Pilot’s learnings to assist the efficient transition of hydrocarbon fields from production to carbon capture and storage (CCS).
